

**ELISA**  
Enabling **Linux** in  
**Safety** Applications

# WORKSHOP

## Ask Me Anything about ELISA or Use of OSS in Safety Critical Applications

November 18-20, 2025  
Co-hosted with Red Hat

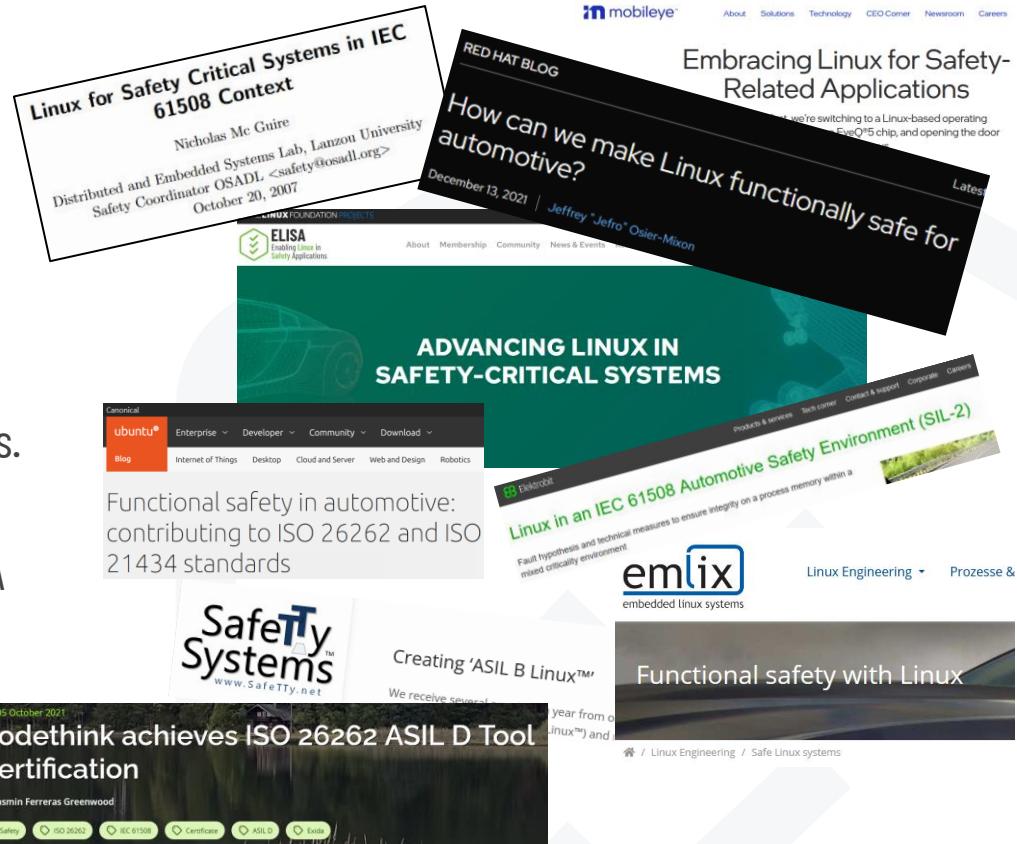

# Linux ecosystem our focus for the next days

# Linux

- Largest community, largest open code base
- High rate of change.
- Made for flexibility and wide set of use cases.
- Spread over whole world and in space.
- Safety Collaborations: SIL2LinuxMP → ELISA
- Gaining momentum for use in high performance products (e.g. SDV\*)

\*SDV: Software-Defined-Vehicle

*“Linux differs from a ‘traditional’  
safety critical OS,...  
but both face challenges  
in modern complex system setups.”*

Photo by Jukan Tateisi on [Unsplash](#)

# *Clash of worlds (or what is often considered unsafe by safety experts):*

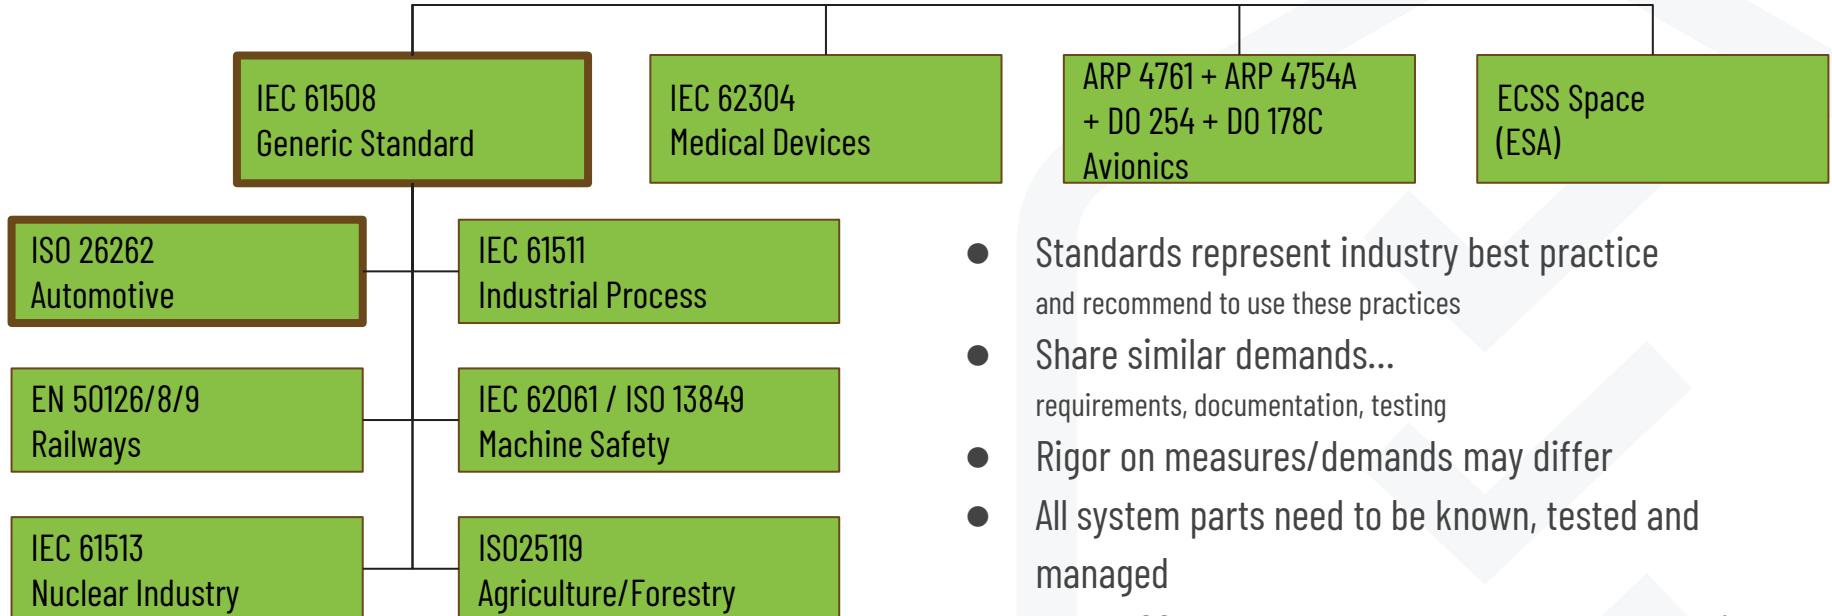

- Memory management
- Dynamic memory allocation
- Caches
- Interrupt handling
- Non Real time scheduling
- Non functional aspects like: Development process & tools
- ...

Photo by Jukan Tateisi on [Unsplash](#)

# A bit on standards and processes

# Samples of safety (integrity) standards

# Route to Safety Certification

- IEC 61508 Route 3S for pre-existing software
- ISO 26262-8 clause 12 approach for simple automotive pre-existing SW
- ISO PAS 8926 as a bridge for complex software → migrates into ISO 26262
- Challenges increase with increased system complexity  
(like Linux systems)

# Introduction & Motivation

- Safety integrity standards need to adapt to increasing complexity of products
- Safety requires a robust fundament based on processes, technical measures and statistical analysis
- Growing industry interest in open source for safety-certified applications
- Current challenges in integrating open-source solutions with safety standards

*(China is already making heavy use of Open Source e.g. in Automotive systems)*

# Project Orientation

# ELISA Project

- Enabling **Safety-critical applications** with **Linux** (beyond Security)
- Increase **dependability & reliability** for whole Linux ecosystem
- **Various use cases:** Aerospace, Automotive, Medical & Industrial
- Supported by major **industrial grade Linux distributors** known for mission critical operation and various industries representatives
- Close community collaboration with **Xen, Zephyr, SPDX, Yocto & AGL** projects
- **Reproducible system** creation from specification to testing
- SW **elements**, engineering **processes**, development **tools**

Work in Progress - License: CC-BY-4.0

*"The mission of the project is  
to define and maintain a common  
set of elements, processes and tools  
that can be incorporated into  
Linux-based, safety-critical systems  
amenable to safety certification."*

from the [technical charter](#)

# Linux in Safety Critical Systems

***"Assessing whether a system is safe,  
requires understanding the system sufficiently."***

- Understand Linux within that system context and how Linux is used in that system.
- Select Linux components and features that can be evaluated for safety.
- Identify gaps that exist where more work is needed to evaluate safety sufficiently.

# STOP - Limitations! The collaboration ...

- *cannot* engineer your system to be safe.
- *cannot* ensure that you know how to apply the described process and methods.
- *cannot* create an out-of-tree Linux kernel for safety-critical applications.  
(continuous process improvement argument!)
- *cannot* relieve you from your responsibilities, legal obligations and liabilities.

But...

**ELISA provides a path forward and peers to collaborate with!**

# ELISA Working Groups - Fit in an Exemplary System

- **Linux Features, Architecture and Code**  
Improvements should be integrated into the reference system directly.
- **Tools and Engineering process** should serve the reproducible product creation.
- **Medical, Automotive, Aerospace** and future WG use cases should be able to strip down the reference system to their use case demands.

# Interactions Between the Communities

- Open source projects focusing on safety-critical analysis

- Open source projects with safety-critical relevance and comparable system architecture considerations

- Further community interactions

*"If you have an apple and I have an apple and we exchange these apples then you and I will still each have one apple  
But if you have an idea and I have an idea and we exchange these ideas, then each of us will have two ideas*

— George Bernard Shaw

# Attend Events

# Workshops

Bi-annual technical collaborative event

Aimed at accelerating knowledge sharing, collaboration, and problem solving to advance the use of open source in safety-critical systems

Most attend in person and can accommodate virtual attendees

Materials made available to registrants

Workshop Series <https://elisa.tech/workshop-series/>

# Seminar Series

Have held 19 seminars since launch in 2023

Topics range from IOS-PAS, SPDX, Xen, Yocto, State of Art of Certifying Linux, Rust Compiler and Enabling Linux towards Meeting Avionics Safety Standards, SEooC and more

Average live attendees 50-60 ppl

Materials made available to registrants and promoted to the broader community

Seminar Library: <https://elisa.tech/seminar-series/>

SEMINAR

Wednesday, September 4, 2024  
7am PT / 2pm UTC / 4pm CET

## Meet the New KernelCI

Gustavo Padovan  
Kernel Lead  
Collabora

Don Zickus  
Distinguished Engineer  
Red Hat

ELISA  
Enabling Linux in  
Safety Applications

## Making Linux Fly

Towards Certified Linux Kernel

# Safety Critical Software Summit now Open Source Summits

Major sponsor and community members are key participants at Critical Software Track at Open Source Summit Events world wide

Engaging Open Source Community on topic of enabling open source to be used in safe systems.

Started in [EOSS Seattle June 2024](#) and in 2025 now a part of all OSS events in NA, EU, Korea, Japan.

Check out the upcoming [Sessions \(filter by Safety Critical Software\)](#) at OSS Korea in November 2025

Work in Progress

Type: Safety Critical Software Clear Filter

Tuesday, November 4

14:30 KST Enhancing Spatial Safety: Better Array-bounds Checking in C (and Linux) - Gustavo A. R. Silva, The Linux Foundation  
CARNATION (5F)

Wednesday, November 5

13:35 KST Driving Safety Forward: Lessons Learned From Deploying OSS in Real-world Automotive - Jaylin Yu, EMQ  
ORCHID 1 (2F)

14:15 KST DO-330 Qualification of Enhanced LLVM Structural Coverage Tool - Minji Park & Seojin Kim, The Boeing Company  
ORCHID 1 (2F)

14:55 KST Introduction and Consideration of Temporal Partitioning in Avionics With Open Source Ecosystem - Haesun Kim & Gihwan Kwon, The Boeing Company  
ORCHID 1 (2F)

15:55 KST Smarter Code, Sneakier Risks: Supply Chain Security in the Age of AI - Lavakush Biyani, Harness  
ORCHID 1 (2F)

16:35 KST Detecting Double Free With BPF - Bojun Seo, LG Electronics  
ORCHID 1 (2F)

17:15 KST Telco Supply Chain Security: Implementing ISO 18974 & SBOM - Haksung Jang, SK Telecom  
ORCHID 1 (2F)

# Safe Usage of Linux Micro-conference at Linux Plumbers Conference

Collaboration, discussions, and problem solving  
with Linux kernel community

How can we establish consistent linkage  
between code, tests, and the requirements  
that the code satisfies?

This MC addresses critical challenges in  
requirements tracking, documentation, testing,  
and artifact sharing within the Linux kernel  
ecosystem.

[First MC](#) held at LPC in Vienna, September 2024

Next one at LPC Japan, December 2025

# Glimpse on safety critical OSS ecosystem

# Example of the safety open source landscape

## It is not all about Linux ... spot check

Autoware	Iceoryx2 (Exkide)	ELISA	ThreadX (Eclipse)	SPDX Safety Profile WG	StrictDoc	OpenFast Trace	seL4	Trustable (Eclipse)	Safety- Critical Rust Consortium	Ferrocene
Eclipse Safe Open Vehicle Core	Halo OS (Li Auto)	CentOS Automotive SIG	SOAFEE	BASIL (ELISA)	Sphinx- Needs (useblocks)	LLVM Qualificatio n WG	Xen Project	L4Re (Kernkonze pt)	Zephyr Safety WG	Apex.AI

# Procedural Requirements for Safety

- Structured documentation of requirements
- Test-to-requirement traceability
- Keeping documentation synchronized with code
- Achieving maintainability over decades
- (And of course all the technical things needed to create a system)

# Community Challenges For All Projects

- Argument of „OSS development is not organized like commercial software“
- Less influence on maintainers  
(positive & negative – no traditional supplier management)
- Harder to train/direct developers
- Liability of a community?  
(but commercial provider may be liable – insurance)
- Development process: Requirements, traceability, v-model,...  
mapping safety integrity standards

# Summary – The storyline for the next 2 days. 😊

- Linux for safety critical systems in Aerospace, Automotive, Railways (~5)
- System architectures & composition (~5)
- Testing & Tracing (~6)
- Requirements & their tools (~5)
- Standards and OSS processes (~4)
- Tools (~5)
- Touching the Linux Kernel (~3)
- Going beyond project boundaries towards adjacent communities (~9)

A lot of topics will be discussed  
during the WS, but now...  
it is time to ask questions  
and get you on board!
